Subject: Comments on the Olin community remediation strategy

Dear Ms. Morash -

I believe that the EPA should take the feedback from the scientists personally involved in the research on this site, and implement the extended NDMA testing, and incorporation of testing for additional compounds in both the aqueous and non aqueous phase of liquid contaminants, and in the soil at large. In my mind, we should not take a half measure in remediation, when a half measure in prevention caused the longstanding issues for the community near the Olin site. We are morally obliged to hold those responsible to full account by taking every measure suggested.
